

# Symantec CBX

## The next evolution of legendary security

### Overview

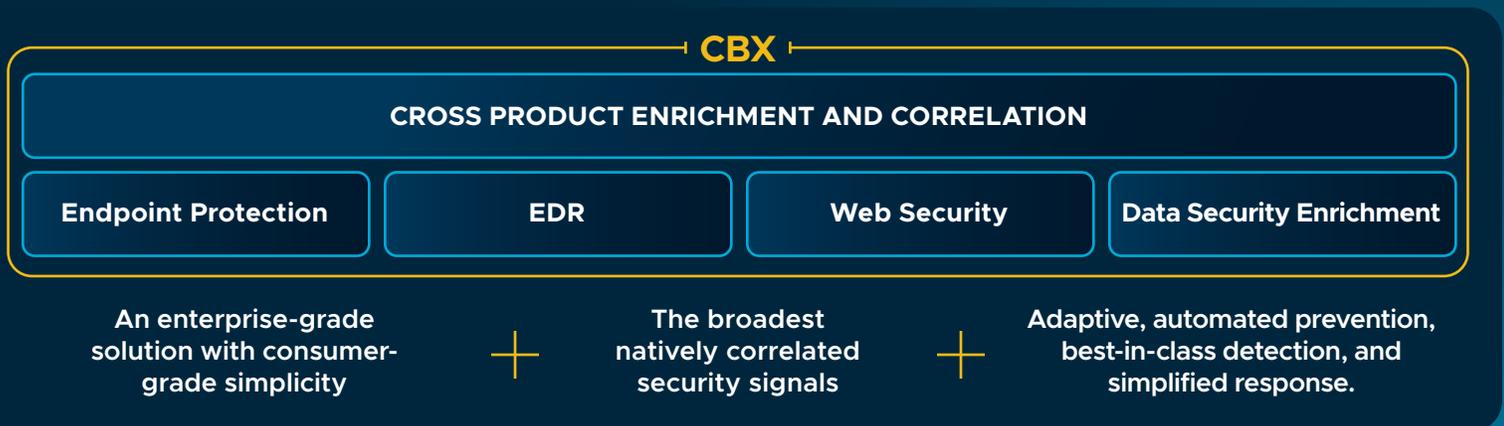

Attackers have expanded their scope. They are no longer focused solely on large enterprises, governments, and military entities. Organizations of all sizes and industries are now under threat from advanced destructive attacks deployed at scale. These enterprise-grade attacks can decimate smaller organizations, who become casualties of a bigger cyberwar, fueled by AI agents that never miss a day of work.

At the same time as attacks diversify and ramp up, smaller security teams are understaffed and underfunded, juggling disparate solutions that leave them multiple steps behind attackers. Unevolved security tools can't keep pace with rapidly evolving attackers. These tools do not align with today's organizations' operations or security programs.

### Solution

Symantec CBX, the next evolution security platform from Symantec and Carbon Black, solves these problems by leveraging cross-domain expertise

to deliver an end-to-end platform equipped for today's advanced threats.

### With CBX, you can:

**Prevent attacks across domains.** Secure devices and data, from the endpoint to the cloud and everywhere in between.

**Tailor defenses.** Adaptive Protection leverages machine learning for rapid detection, responsive defense bolstering, and automated response.

**See the complete attack chain.** Threat Tracer gives you a 360° view—from initial access to data exfiltration—all in a single timeline, with no need for manual correlation across multiple consoles.

**Get real-time visibility.** EDR offers powerful insights fueled by high volume threat visibility, alongside Incident Prediction that stops LOTL attacks even before they start.

**Access data security insights instantly.** See what sensitive data an attacker accessed without leaving the incident console or calling the DLP team.

**Simplify with a single agent and console.** Centralize security capabilities and management into an easy to use console and single lightweight agent.

**ADAPT****Dynamic prevention**

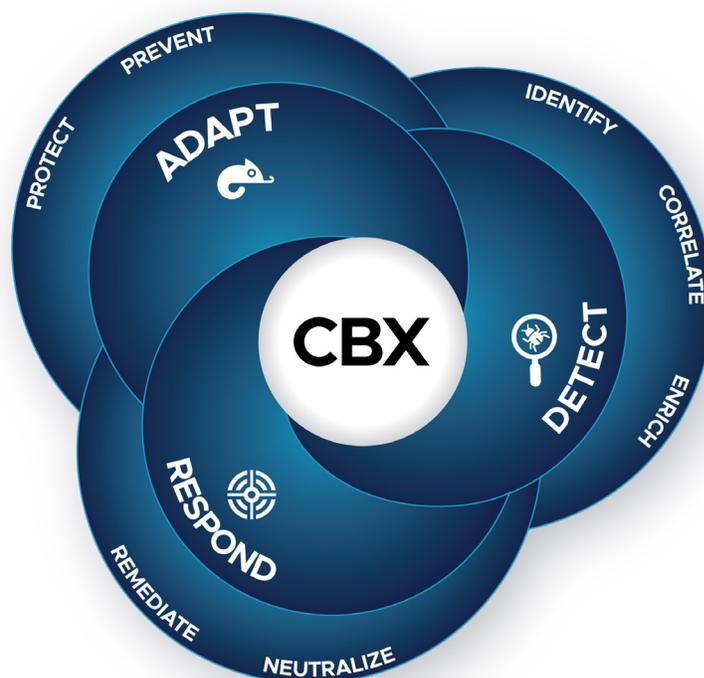

- » Automatically strengthen defenses by reducing the attack surface based on your environmental security signals
- » Lighten your security team's workload, freeing them up to focus on more impactful tasks

**DETECT****Native data correlation**

- » Surface contextualized detections that make it easy for teams to take action
- » Eliminate the need to integrate and correlate data from different systems
- » Correlate endpoint process execution data, network connection logs, DLP content inspection events, and more to build consumable attack timelines

**RESPOND****Intuitive investigation**

- » Enable analysts to see the full scope of an attack in a single, intuitive visualization
- » Integrate AI-generated incident summaries with investigative workflows to enable fast, confident remediation
- » Enable security teams to take quick, confident action to protect their organization

**In an expanding attack space, CBX empowers you to outpace attacker evolution.**

## Enterprise-grade threats demand enterprise-grade defenses.

### Stop breaches and protect sensitive data.

CBX's comprehensive protection helps you stay ahead of the next threat and safeguard your most important asset—your data.

### Deploy rapid and accurate threat response.

Quickly identify, understand, and neutralize threats to reduce the time between detection and remediation and minimize impact.

### Simplify compliance and data privacy.

Meet regulatory requirements and simplify ongoing data privacy thanks to CBX's streamlined approach.

### Boost efficiency and cut costs.

Optimize security operations, reduce tool sprawl, lower operational expenses, and get more out of existing resources.

### Minimize analyst burnout.

CBX automates, prioritizes, and streamlines detection—easing the burden on security teams while enabling them to keep up with the threats that matter most.

### Protect business operations and trust.

Ensure business continuity, protect brand reputation, avoid financial penalties and build trust with a strong security posture.

## KEY FEATURES

### Unlike other XDR solutions, CBX enables you to:

- » Bridge security gaps that are often overlooked.
- » See the full attack story at a glance.
- » Simplify operations without sacrificing effectiveness.
- » Reduce SIEM spend with curated insights
